Hi Gang.

Discovered that I have 2 extra Drake 500 HZ filters int the drawer. \$45.00 each gets them. If you need one let me know.

Thanks

KIM

I posted this list on rec.radio.swap and got one response! Apparently a lot of folk have problems with these usenet groups. These are nice radios and really glow in the dark.

1. Pilot Wasp. All original with tubes, cabinet, full set of coils in original box. \$350 plus S&H. (This radio is in negotiation)
2. Crosley Trirdyn. With tubes. Plain vanilla model. \$100 plus S&H
3. Tuska 225 with tubes. \$450 plus S&H
4. Hallicrafters SX-62. No speaker. Working and clean \$250 plus S&H
5. Hallicrafters SX-28A with matching speaker. Working \$350 plus S&H

All OBO of course.

Respond only by E-Mail please to dmedley@ix.netcom.com

While looking through the Lindsay's Technical Books catalog, I saw a reprint of "The Boy Electrician" by Alfred P. Morgan, a book I remember from my boyhood. I distinctly remember making an electric buzzer which worked and an electric motor which didn't.

Around the same time, I remember another book which was the one that got me hooked on electronics. It was called something like A Boy's First Book of Electronics. Although the memories have faded (quite) a bit after 30 years, I do remember that there were many neat projects including receivers and a low power AM transmitter (all tubes of course). Unfortunately, the projects in the book were a bit beyond the skills (and allowance) of a 10 year old but, I must have looked at that book every day for many months.

I was wondering if anyone has some better memories of this book? If some one remembers the exact name and author, I would certainly aid in my search for the book. For some reason, the name Morgan sticks in my mind. Could this be a follow on to The Boy Electrician? Anyway, I think that this book could be a good way for a member of the transistor generation to become acquainted with our old friend, the vacuum tube.

73's, Eric WD6DGX
